

# WEEKLY ETF REVIEW

Thursday, 11 June 2026

Investor Report

This report is for informational and educational purposes only; please see the disclaimer at the end.

## PRIMARY REGIME

**Risk-on growth**

## GEOPOLITICAL REGIME

**Elevated but localized**

## MAIN TAKEAWAY

**SMH remains the earned leader, but portfolio rotation is governed by source/destination evidence rather than static review labels.**

2

## PORTFOLIO ACTION SNAPSHOT

| Recommendation             | Tickers / notes                                                                                                                                                                                          |
|----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Add / destination          | None                                                                                                                                                                                                     |
| Hold                       | <a href="#">CIBR</a> , <a href="#">DFEN</a> , <a href="#">GSG</a> , <a href="#">IEFA</a> , <a href="#">PAVE</a> , <a href="#">SMH</a> , <a href="#">SPY</a> , <a href="#">URNM</a> , <a href="#">XLU</a> |
| Hold with override         | <a href="#">DFEN</a> , <a href="#">PAVE</a> , <a href="#">SPY</a> , <a href="#">XLU</a> remain under explicit review.                                                                                    |
| Reflected replace / reduce | None                                                                                                                                                                                                     |
| Close                      | None                                                                                                                                                                                                     |

## ROTATION EXECUTION STATUS

- Guarded model rotation is already reflected in the official portfolio state and trade ledger; this run performed no duplicate state or ledger mutation.

## BEST REPLACEMENTS TO FUND

- The guarded model rotation is already reflected in the official portfolio state and trade ledger; no duplicate state or ledger mutation was performed by this report render.

## REGIME DASHBOARD

### Macro regime

- Current regime: Risk-on growth.
- Confidence: 66%.
- Regime memory: Risk-on growth has persisted for 27 run(s); transition state is stable, breadth is improving, and cross-asset confirmation is mixed.
- Decision rule: Do not rotate aggressively unless a regime shift persists for at least two runs or cross-asset confirmation becomes broad.

### Policy and geopolitical status

- Status: Elevated but localized.
- Fed stance: Restrictive / data-dependent. Portfolio read-through: Prefer quality, profitable growth and cash discipline over weak balance-sheet beta.
- ECB stance: Tightening / inflation-sensitive. Portfolio read-through: [IEFA](#) exposure is now present, but further non-U.S. developed allocations still require relative-strength, pricing and portfolio-discipline confirmation.

### What changed

- AI / semiconductor leadership remains the dominant equity impulse.
- Commodity-breadth hedge behavior remains under review rather than automatic ballast.

### Portfolio implications

- Risk appetite is supportive, but fresh adds still need position-size room and pricing confirmation.
- Growth and infrastructure lanes can be considered if they do not worsen concentration.

- Defensive hedges should be reviewed for opportunity cost.

## Policy catalysts included in this report

- ECB rate-policy tightening: The ECB raised rates this week in response to renewed inflation pressure; this raises the hurdle for rate-sensitive and non-U.S. developed-market exposure but does not override pricing, relative-strength or portfolio-discipline gates.
- AI infrastructure and semiconductor supply chains: Capital spending and strategic supply-chain policy continue to support semiconductor and infrastructure lanes.
- Defense and sovereign resilience: Defense-budget durability remains a structural support, but ETF vehicle choice still matters.

### 4

## STRUCTURAL OPPORTUNITY RADAR

| Theme                                     | Primary ETF          | Alternative ETF      | Why it matters                                                                                                                                                                                                                                         | Structural fit | Macro timing | Status                                                        | What needs to happen                                                                                | Time horizon |
|-------------------------------------------|----------------------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------|--------------|---------------------------------------------------------------|-----------------------------------------------------------------------------------------------------|--------------|
| AI compute infrastructure                 | <a href="#">SMH</a>  | <a href="#">SOXX</a> | Semiconductor and AI capex remains the cleanest funded structural growth lane. Macro filter: Regime and price leadership still support AI compute exposure, but concentration discipline applies.                                                      | 5              | 5            | Structurally actionable, but no fresh capital while above cap | AI infrastructure leadership remains persistent, but position-size discipline matters.              | 3-12 months  |
| Grid buildout / electrification           | <a href="#">PAVE</a> | <a href="#">GRID</a> | Power demand, grid bottlenecks and reshoring capex support infrastructure spend. Macro filter: AI power demand and infrastructure policy support the grid lane; funding still depends on <a href="#">PAVE</a> -vs- <a href="#">GRID</a> duel evidence. | 5              | 4            | Actionable now                                                | <a href="#">PAVE</a> remains useful, but <a href="#">GRID</a> is the cleaner thematic challenger.   | 3-12 months  |
| Cybersecurity resilience                  | <a href="#">CIBR</a> | <a href="#">BUG</a>  | Cyber spend is linked to AI, cloud, data-center and geopolitical resilience.                                                                                                                                                                           | 4              | 4            | Actionable now                                                | Offers digital-infrastructure exposure with less direct semiconductor cyclicity.                    | 3-12 months  |
| Defense innovation / sovereign resilience | <a href="#">PPA</a>  | <a href="#">ITA</a>  | Defense spending remains structurally durable, but vehicle selection must be proven. Macro filter: Policy support is durable, but implementation quality remains the main decision bottleneck.                                                         | 5              | 3            | Watchlist / under review                                      | The lane remains relevant, but <a href="#">PPA</a> must justify itself versus <a href="#">ITA</a> . | 3-12 months  |
| Healthcare quality and defensive growth   | <a href="#">XLV</a>  | <a href="#">VHT</a>  | Healthcare quality can provide defensive growth without speculative biotech beta.                                                                                                                                                                      | 3              | 3            | Watchlist / under review                                      | More useful if broad equity leadership narrows further.                                             | 3-12 months  |

| Theme                                     | Primary ETF          | Alternative ETF     | Why it matters                                                                                                                                                              | Structural fit | Macro timing | Status                   | What needs to happen                                                              | Time horizon |
|-------------------------------------------|----------------------|---------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------|--------------|--------------------------|-----------------------------------------------------------------------------------|--------------|
| Non-U.S. developed market diversification | <a href="#">IEFA</a> | <a href="#">EFA</a> | Non-U.S. developed exposure has been increased through <a href="#">IEFA</a> , but still requires relative-strength confirmation before becoming a broader allocation theme. | 3              | 3            | Watchlist / under review | Becomes fundable if U.S. factor concentration rises or non-U.S. breadth improves. | 3-12 months  |

## Best structural opportunities not yet actionable

- Food security / agriculture inputs
- Water infrastructure / treatment
- Critical minerals / copper / refining

## Notable lanes assessed but not promoted this week

| Theme                                        | Primary ETF          | Why not promoted                                                                | What would change that                                                    |
|----------------------------------------------|----------------------|---------------------------------------------------------------------------------|---------------------------------------------------------------------------|
| Copper and electrification materials         | <a href="#">COPX</a> | Scored below the live radar cutoff versus stronger funded and challenger lanes. | Becomes more fundable if copper momentum and China demand confirm.        |
| Financial infrastructure and market plumbing | <a href="#">KCE</a>  | Scored below the live radar cutoff versus stronger funded and challenger lanes. | Useful diversifier if financial infrastructure earnings broaden.          |
| Critical minerals / copper / refining        | <a href="#">REMX</a> | Scored below the live radar cutoff versus stronger funded and challenger lanes. | Needs supply-chain policy plus price momentum.                            |
| Water infrastructure / treatment             | <a href="#">FIW</a>  | Scored below the live radar cutoff versus stronger funded and challenger lanes. | Moves up if relative strength improves versus <a href="#">PAVE/GRID</a> . |
| Industrial automation and factory software   | <a href="#">ROBO</a> | Scored below the live radar cutoff versus stronger funded and challenger lanes. | Needs clearer industrial order momentum.                                  |

## 4A. Short Opportunity Radar

| Short theme               | Candidate ETF        | Short thesis                                           | Trigger                                                                       | Invalidation                                    | Time horizon | Confidence |
|---------------------------|----------------------|--------------------------------------------------------|-------------------------------------------------------------------------------|-------------------------------------------------|--------------|------------|
| Rate-sensitive small caps | <a href="#">IWM</a>  | Restrictive real rates pressure weaker balance sheets. | <a href="#">IWM</a> breaks down versus <a href="#">SPY</a> while yields firm. | Clear easing impulse and better credit breadth. | 1-3 months   | Medium     |
| China platform beta       | <a href="#">KWEB</a> | Policy confidence remains fragile.                     | Failed rally or renewed FX/policy stress.                                     | Durable stimulus and earnings recovery.         | 1-3 months   | Medium     |

| Short theme                 | Candidate ETF        | Short thesis                                             | Trigger                                   | Invalidation                                    | Time horizon | Confidence |
|-----------------------------|----------------------|----------------------------------------------------------|-------------------------------------------|-------------------------------------------------|--------------|------------|
| Long-duration bonds         | <a href="#">TLT</a>  | Sticky inflation and real-rate risk remain headwinds.    | Real yields rise again.                   | Growth scare and decisive lower-yield breakout. | 1-3 months   | Medium     |
| Speculative clean-tech beta | <a href="#">ICLN</a> | Financing pressure and weak profitability remain issues. | Failure to recover in broad risk-on tape. | Sharp rate relief or major policy surprise.     | 3-12 months  | Medium     |

5

## KEY RISKS / INVALIDATORS

- [SPY](#) plus [SMH](#) creates high U.S. tech / AI factor overlap.
- Hedge and defensive sleeves must justify their capital allocation through role validity, pricing and relative-strength evidence.
- [PPA](#) and [PAVE](#) remain replaceable until their ETF implementation quality is proven.
- Non-U.S. developed exposure has been increased through [IEFA](#), but breadth and relative-strength confirmation remain required.

6

## BOTTOM LINE

- **What should be exited first:** Determined by the rotation plan when active; otherwise no close is executed by legacy state.
- **What deserves additional capital first:** [SMH](#) remains the best-ranked funded lane, subject to the max-position rule.
- **What is acceptable but replaceable:** Holdings with high release scores require reduce/replace/override discipline.
- **Single best portfolio upgrade this week:** Use the rotation artifact as the bridge between evidence and target weights.

## EQUITY CURVE AND PORTFOLIO DEVELOPMENT

- Starting capital (EUR): 100000.00
- Current portfolio value (EUR): 107747.59
- Since inception return (%): 7.75
- Equity-curve state: Reconciled to Section 15 with full valuation history
- EUR/USD used: 1.1579
- Notes: Section 7 uses the validated valuation history plus the current portfolio NAV; Section 15 is rendered from the same reconciled portfolio state.

| Date       | Portfolio value (EUR) | Comment                                                                     |

## ASSET ALLOCATION MAP

| Bucket                | Stance      | Reason                                                                                                                      |
|-----------------------|-------------|-----------------------------------------------------------------------------------------------------------------------------|
| US equities           | Neutral     | Investable but concentration risk is explicit.                                                                              |
| Europe equities       | Neutral     | IEFA now provides non-U.S. developed-market exposure, but broader allocation still requires relative-strength confirmation. |
| EM equities           | Underweight | USD and oil sensitivity remain headwinds.                                                                                   |
| large cap             | Neutral     | Quality leadership still works.                                                                                             |
| small cap             | Underweight | Rates and refinancing remain difficult.                                                                                     |
| growth                | Neutral     | Selective growth led by <a href="#">SMH</a> remains attractive.                                                             |
| quality               | Overweight  | Earnings durability remains valuable.                                                                                       |
| defensive ballast     | Neutral     | Hedge and cash-like roles remain under opportunity-cost review.                                                             |
| industrials / defense | Overweight  | Structural thesis valid; vehicle under review.                                                                              |

| Bucket         | Stance    | Reason                                                                                                                                      |
|----------------|-----------|---------------------------------------------------------------------------------------------------------------------------------------------|
| non-USD assets | Watchlist | <a href="#">IEFA</a> now provides non-U.S. developed-market exposure, but broader allocation still requires relative-strength confirmation. |

2

## SECOND-ORDER EFFECTS MAP

| Driver                               | First-order effect                                         | Second-order effect                                                | Likely beneficiaries                                  | Likely losers           | ETF implication                       | Timing     | Confidence |
|--------------------------------------|------------------------------------------------------------|--------------------------------------------------------------------|-------------------------------------------------------|-------------------------|---------------------------------------|------------|------------|
| AI leadership                        | <a href="#">SMH</a> remains the cleanest growth expression | Concentration must be watched                                      | <a href="#">SMH</a> , <a href="#">SOXX</a>            | Lower-quality cyclicals | Hold near max size                    | Immediate  | High       |
| Factor concentration                 | <a href="#">SPY</a> and <a href="#">SMH</a> overlap        | Portfolio is less diversified than ticker count suggests           | <a href="#">QUAL</a> , <a href="#">IEFA</a> watchlist | Overlapping U.S. beta   | Keep <a href="#">SPY</a> under review | 1-3 months | Medium     |
| Defense thesis vs ETF implementation | Defense remains structurally valid                         | <a href="#">PPA</a> must justify itself versus <a href="#">ITA</a> | <a href="#">ITA</a> , <a href="#">PPA</a>             | Weak vehicle selection  | Hold <a href="#">PPA</a> under review | Immediate  | Medium     |
| Hedge drawdown                       | Hedge role must be proven                                  | <a href="#">GSG/BIL</a> remain challengers                         | <a href="#">GSG</a> , <a href="#">BIL</a> , cash      | Unproductive hedge      | Hold hedge sleeve under review        | Immediate  | Medium     |

3

## CURRENT POSITION REVIEW

| Ticker               | Action            | Score | Fresh cash             | Role                 | Required next action                                                |
|----------------------|-------------------|-------|------------------------|----------------------|---------------------------------------------------------------------|
| <a href="#">CIBR</a> | hold              | 4.97  | Hold / monitor         | Rotation destination | Monitor relative strength and portfolio concentration.              |
| <a href="#">DFEN</a> | hold              | 3.10  | No / under review      | Rotation destination | Review defense vehicle fit versus ITA/PPA and leverage constraints. |
| <a href="#">GSG</a>  | hold              | 3.59  | Hold / monitor         | Rotation destination | Monitor commodity breadth and hedge contribution after execution.   |
| <a href="#">IEFA</a> | hold              | 3.52  | Hold / monitor         | Rotation destination | Monitor non-U.S. breadth and SPY-relative performance.              |
| <a href="#">PAVE</a> | Hold under review | 3.68  | Smaller / under review | Real-asset capex     | Force alternative duel; upgrade, reduce, replace, or close          |

| Ticker               | Action                                   | Score | Fresh cash             | Role                 | Required next action                                               |
|----------------------|------------------------------------------|-------|------------------------|----------------------|--------------------------------------------------------------------|
| <a href="#">SMH</a>  | Hold / no fresh cash while above 25% cap | 4.28  | Smaller / under review | Growth engine        | Force alternative duel; upgrade, reduce, replace, or close         |
| <a href="#">SPY</a>  | Hold                                     | 3.53  | Smaller / under review | Core beta            | Force alternative duel; upgrade, reduce, replace, or close         |
| <a href="#">URNM</a> | Hold                                     | 3.70  | Hold                   | Strategic energy     | Hold                                                               |
| <a href="#">XLU</a>  | hold                                     | 3.00  | No / under review      | Rotation destination | Review defensive ballast role versus BIL/SHV and opportunity cost. |

4

## BEST NEW OPPORTUNITIES

- [SMH](#) remains the best earned exposure, but no fresh capital is added while it is above the 25% max-position cap.
- [PPA](#) / [ITA](#): Defense spending remains structurally durable, but vehicle selection must be proven.
- [XLV](#) / [VHT](#): Healthcare quality can provide defensive growth without speculative biotech beta.
- [IEFA](#) / [EFA](#): Non-U.S. developed exposure has been increased through [IEFA](#), but still requires relative-strength confirmation before becoming a broader allocation theme.
- Replacement candidates remain evidence-gated: pricing basis and duel status must be visible before funding.

|------------------------------------|----------------------|-------------------------------------------|-------------------------------------------------------------------------------------------------------------------------|----------------|
| Commodity-breadth hedge review     | <a href="#">GSG</a>  | <a href="#">DBC</a> / <a href="#">BIL</a> | Current commodity-breadth hedge role must be proven against cash and broad commodity alternatives.                      | Under review   |
| Non-U.S. developed diversification | <a href="#">IEFA</a> | <a href="#">EFA</a>                       | <a href="#">IEFA</a> now provides non-U.S. developed-market exposure, with broader allocation still under confirmation. | Watchlist      |

## Recommendation discipline continuity

- Rotation execution: completed and persisted in the official portfolio state and trade ledger.
- Replacement challengers: not fundable without completed duel.

## Constraints

- Max position size: 25% soft cap; current inherited overweights require no-fresh-cash and review/trim discipline
- Max number of positions: 8 soft target; current inherited count may exceed this until guarded rotation reduces it
- UCITS only: No
- Leverage ETFs allowed: No
- Drawdown tolerance: Moderate
- Income vs growth preference: Balanced growth with resilience bias

## Changes since last review

- Added: the latest guarded model rotation is already reflected in the official portfolio state; no duplicate execution was performed.
- Reduced: None unless explicit state says otherwise.
- Closed: None.
- Thesis changes: No structural thesis was abandoned; implementation, macro-regime and rotation discipline are materially tighter.
